2. Workshop Organization

Workshop objectives:

- i) identify high priority, strategic areas of subsurface science or engineering or NE USA geology, for which basic research conducted in a deep continental borehole could lead to major advances in knowledge.
- ii) design borehole experiments (including sampling plans, monitoring in and adjacent to a borehole, complementary modeling, and analyses) that advance science/engineering in areas in which the assembled participants are interested.
- iii) identify synergies between those experiments and the Cornell focus on assessments of reservoir properties and technical risks for a geothermal energy extraction project.
- iv) lay the foundation for preparation of one or more scientific drilling proposals, targeted toward one or more appropriate funding sources, and initiate the proposal preparation steps.
- v) initiate the assembly of a suite of state-of-art published materials that underpin the selections of proposal topics, the experimental design choices, and the analyses of results

<u>Posters:</u> Participants are welcome to bring a poster on the Workshop-relevant topic.

Workshop schedule:

January 8

	Who or what	Objective or task
8:30-9:00	Welcome; introductions of selves	
AM		
9:00-9:20	Cornell hosts	Overview of Cornell's geothermal project:
AM		heat demand, reservoir targets, plan for
		test borehole. Workshop objectives and
		expectations.
9:20-	Lightning session (5 minute	Brief introduction to state-of-the-art
10:20	presentations)	understanding and/or characteristics;
	List of topics:	"Teasers" for content of breakouts;
	Induced earthquakes	Identify relevant content expertise among
	Experimental rock mechanics (in	participants
	relation to fluid injection and fault	
	activation)	
	Rock-fluid-chemistry-mechanics	
	interactions and impacts	
	• State of stress heterogeneity	
	Hydrological monitoring	
	Crystalline basement of Adirondacks	
	Deep strata & pore fluids of central	
	NYS	

Seismicity and structures of central NYS **Appalachian Basin boreholes* 10:20- 10:40 AM 10:40- 11:45 AM 10:45 AM 10:45 AM 10:46 First break-out session 11:45 AM 10:46 Its of initial topics to seed discussion (changeable by the participants) 1. Stress – fluid flow – earthquakes: What are the big questions and big opportunities in a central New York borehole? 2. Rock-fluid-chemistry-mechanics interactions and big opportunities in a central New York borehole? 3. For which topics of NYS geological history would borehole science opportunities most accelerate progress? 4. How best can outcrop and Cornell borehole studies be integrated to accelerate understanding of geothermal reservoirs in low porosity sedimentary and metamorphic rock? 5. How best to drill, sample, instrument and monitor the midgrade metamorphic rocks below Ithaca? 11:45- 12:30 PM **PSHADIRON Session of coverlaps and synergies between the priority topics of the differing topical groups or opportunities om of challenges or opportunities omitted thus far		Natural fractures of central

12:30-	Lunch in Snee Atrium	Informal discussions;
1:30		Poster session in Atrium
1:30-3:00	Science topic breakout groups	Discuss and improve strategies for
	reconfigured with a regional	experiments and sampling specific to the
	expert inserted into each group	best available knowledge about local
		subsurface materials, fluids and conditions
3:00-3:15	Coffee break	Poster session in Atrium
3:15-3:30	Plenary	flex time: short presentations (5 minutes) if
		someone needs this opportunity
3:30-5:00	Science topic breakout groups	outline general strategies for experiments
PM	reconfigured again with a	and sampling to achieve "science
	borehole engineering expert	challenge" goals and likely to be technically
	inserted into each group	viable
5:00-5:30	break	Poster session in Atrium
PM		
5:30-7:30	Dinner in Snee Atrium	Informal discussion;
PM		Poster session in Atrium

January 9

	Who or what	Objective or task
8:30-9:00	Gather, coffee, continental	
AM	breakfast	
9:00-	Full workshop plenary session	Each breakout group describes their short list of
10:00 AM		"science challenge" targets and strategies
10:00-	Breakout groups by expertise	For each "science challenge" nascent plan,
10:30	(rock core methods, logging	improve plan for instrumentation or sampling or
	and tracer methods, pore	analytical methods
	fluids methods, seismic	
	/geophysical methods, etc)	
10:30-	coffee break	Poster session in Atrium
10:50 AM		
10:50-	Continue preceding breakout	Continue to identify best instrumentation or
11:15 AM	groups	sampling methods
11:15-	Plenary session	Discussion of funding opportunities for borehole
11:30 PM		science experiments, samples, and analyses

11:30- 12:30 PM	Plenary session with Cornell project staff engineers and geologists	Discuss comparison between narrow borehole test needs for Cornell geothermal reservoir analyses and the basic science experimental opportunities illuminated in Workshop; Perceptions of pragmatic limits, including time and money; Planning interface between Cornell ESH staff and groups preparing proposals and accessing borehole.
12:30-	Lunch in Snee Atrium	Informal discussions;
1:30		Poster session in Atrium
1:30-2:15	Plenary session;	Workshop participants briefly describe state of
	Dean Lance Collins (Cornell)	science planning (during boring, immediately
	and designated leaders of	after boring, longer duration monitoring),
	experimental theme groups	opportunities to secure funding of the
		experiments, and time frame;
		Remarks from Dean Collins about Cornell's
		activities to raise funds for the basic test
		borehole and preferred time frame; Expectation
		for data availability.
2:15-3:00	Plenary session;	Brief presentations on the available core for
	Participants from core	comparative experiments (NYS), core storage,
	storage and data archival	subsurface data archives; Review requirements
	facilities	or guidelines for data and material archiving;
		Discuss challenges and opportunities
3:00-3:15	Coffee break	Poster session in Atrium
3:15-5:00	Breakout groups	Outline the content of multiple proposals borne
PM		from each interest group
5:00 PM	Official end to full group	
	Workshop activities	
5:00-6:15	Break for return to hotel	
6:30-8:00	Dinner for those remaining in	Informal discussion
PM	Ithaca for the night: Moakley	
	House, Cornell golf course	

January 10

Drafting proposal(s) reflective of the Workshop participants' guidance, to be done by a small subset of workshop participants who have previously agreed to this role.
